

Per economia si puo' lavorare sul  $\frac{1}{4}$  di circonferenza

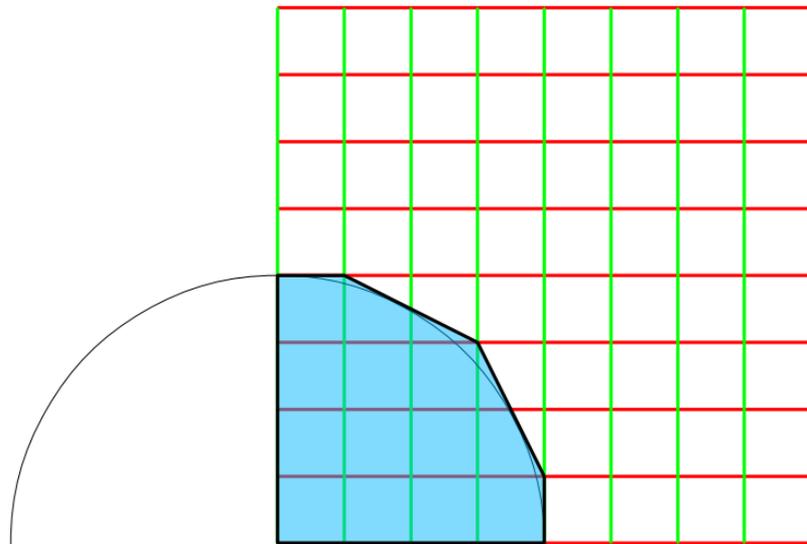

Area = 27  
 $\pi = 108/36 = 3$

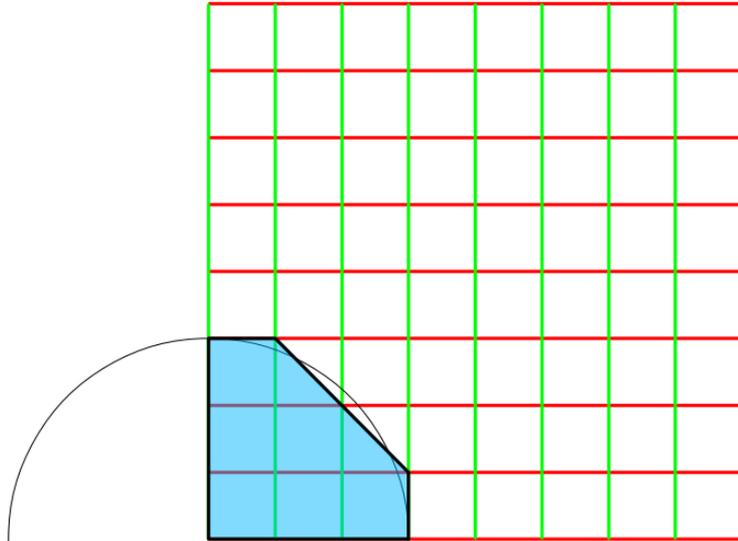

Area = 19,5

$$\pi = 78/25 = 3,12$$

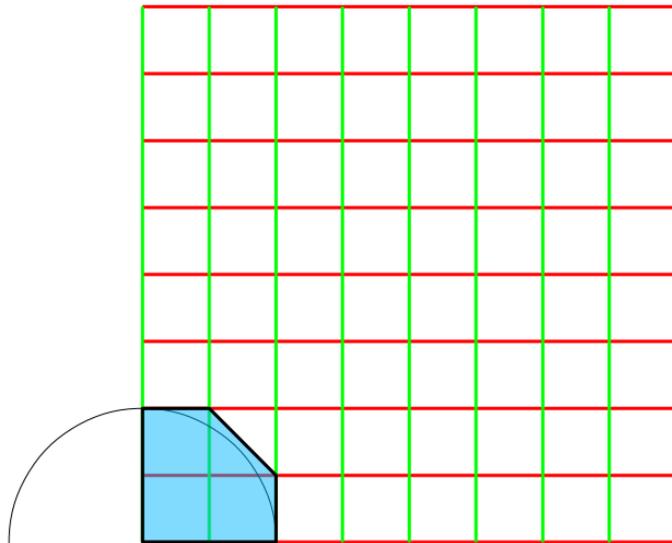

Area = 13

$$\pi = 52/16 = 3,25$$

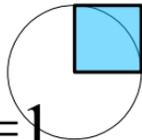

Area = 7

$$\pi = 28/9 = 3,11$$

Area = 3,5

$\pi = 14/4 = 3,5$

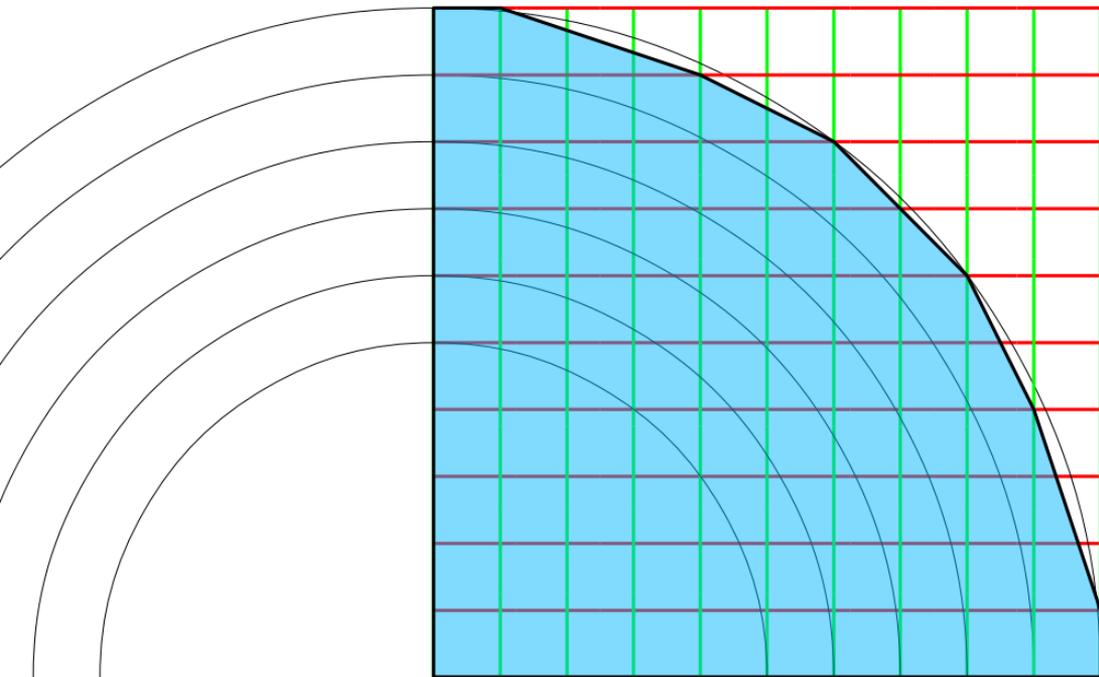

Area = 1

$$\pi = 4/1 = 4$$

Area = 1/2

$$\pi = 2/1 = 2$$

Area = 77

$$\pi = 308/100 = 3,08$$

Non ne disegno altre  
poiche' quelle che si  
intravedono sono discoste  
dalla linea di circonferenza.
